# Carpentry, Timber and Metal Construction – We Build to Suit Your Needs

Special construction or classic craftsmanship? At NUSSLI, we provide active, enthusiastic support for your project. Our staff in timber construction, carpentry and metal construction master every challenge and implement even the boldest visions precisely, efficiently, and on schedule.

**NUSSLI**

## Three Good Reasons for Choosing NUSSLI

### 1. People with a Passion

We are a strong team with a high level of expertise who have the love of wood and metal in their blood. Our 40 employees in Hüttwilen ensure that all of our operations run smoothly. We also enjoy sharing our knowledge with the next generation. Therefore, we train apprentices in all areas. And we are well equipped for tasks requiring more muscle thanks to our team spirit and a reliable network.

### 2. Excellent Equipment

We manufacture our products on 5,000 m<sup>2</sup> of workshop space with state-of-the-art machinery, and our in-house Logistics Department sends them on their way to our clients. CAD systems are connected to our primary machines as a matter of course. They guarantee precision, efficiency and the impeccable exchange of data with clients, architects and planning offices.

### 3. Highest Level of Quality

Quality control starts with the procurement of materials and the incoming goods inspection. We aren't satisfied until we have delivered our designs on time and to the highest standard of quality. In the meantime, there are structural analyses for wood and metal construction, the choice of (at times, extraordinary) building materials, and their processing. And a Wide Range of Experience.

Not only is the temporary staircase sculpture Endless Stair in London an exciting visual experience, but it also fulfills a technical purpose, specifically that of demonstrating the advantages of cross laminated timber panels. NUSSLI's timber and metal specialists implemented the project in its entirety. They sawed, sanded and milled and saw to the glue and screw joints of the prefabricated plywood boards. The structure was thoroughly tested in a test installation before the sculpture was erected in front of the Tate Modern Museum in London.

# Timber Construction - Sustainable Construction Material

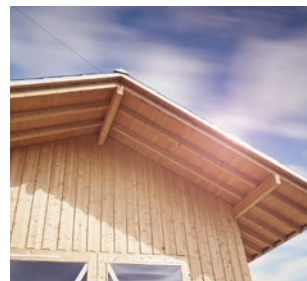

Innovative, creative and always trendy: Wood is a material that meets the highest standards. The name NUSSLI has been closely associated with it since our founding as a carpentry workshop in Hüttwilen in 1941. Our workshop is the source of unique and exclusive wooden structures. Our large production hall gives us scope for construction projects on any scale – for example, when enormous spans, airy structures or ingenious statics are needed.

Conversion – facade, element construction and pitched roof

Conversion – facade, roof construction, skylights, dormers and interior fittings

Hall construction including facade, attic, stairs and windows

## Our Timber Construction Services

- Conversions and Renovations
- Element Construction / Minergie Buildings
- Shoring and Roof Trusses
- Extensions and Solariums
- Facade Renovations
- Roofing and Skylights
- Sheds / Warehouses
- Pavilions
- Terrace Flooring
- Timber Engineering

# Carpentry – Interior Fittings to Meet the Highest Standards

When state-of-the-art machinery, outstanding knowhow and Swiss quality consciousness come together, the result can only be something very special. Our employees are constantly exploring the potential of wood as a material. While focusing on your vision, our experts realize exclusive, customized architectural and interior design concepts with atmosphere.

Bathroom with vanity

Bedroom with bed, partition and dressing area

Interior fittings with buffet installations

## Our Carpentry Services

- Shop Fitting and Exhibition Stand Construction
- Catering Extensions
- Exhibition Structures
- Bars and Counters
- Interior Fittings
- Fitted Kitchens / Bathroom Furnishings
- Built-in Wardrobes
- Furniture and Showcases
- Machining (CNC, Parts Production)

Sushi bar with conveyor

# Metal Construction – Creative Solutions, Innovative Materials

Sparks fly in our workshop for metal construction. But we have much more to offer – from structural analysis to combination with materials such as plastic or glass, to on-site assembly. If you are seeking a worthy partner for bold designs and exceptional architecture, you can rely on the technical knowledge and experience of our experts. We work hand in hand with architects and planning managers and offer you comprehensive knowhow for your projects.

Corner bathroom furnishings made of sheet steel and a thermally insulated steel and glass roofing structure

Steel canopy structure and thermally insulated hot-dip galvanized entrance door

Balcony structure made of steel and glass

## Our Metal Construction Services

- Staircases, Platforms and Railings
- Terrace Glazing
- Canopies
- Extensions and Solariums
- Steel and Aluminum Doors and Windows
- Balcony Structures
- Processing of Copper and Tin into Decorative Covers
- Interior Fittings in Steel and Aluminum
- Exhibition Structures
- Processing and Commissions

Staircase structure with integrated railing

# Quality Work from Switzerland

---

At NUSSLI, craftsmanship meets with experience and tradition. We support architects, private clients, companies and the public sector in construction projects of all sizes – from design and construction planning to production and construction to delivery and installation. Special construction, customized production or classic craftsmanship? Our personnel complete even the most demanding projects on time and with impressive precision. Take advantage of our knowhow, our capacity and our standards of quality.
